ELSEVIER

Journal of Materials Processing Technology 129 (2002) 674–685

Journal of Materials Processing Technology

www.elsevier.com/locate/jmatprotec

Subject Index of Volume 129

Abrasive
Research on abrasives in the chemical–mechanical polishing process for silicon nitride balls, 171
Properties and applications of Ti-coated diamond grits, 369
Abrasive wear
Simulation and experimental analysis of super high-speed grinding of ductile material, 19
Abstract product design model
Creative design research of product appearance based on human–machine interaction and interface, 545
Accuracy
Improvement of electrochemical machining accuracy by using dual pole tool, 15
Acoustics-vibra signal
Study of synthesis identification in the cutting process with a fuzzy neural network, 131
Active vibration isolation
Active vibration isolation of a micro-manufacturing platform based on a neural network, 634
Adaptive fuzzy control system
Adaptive fuzzy control system of a servomechanism for electro-discharge machining combined with ultrasonic vibration, 45
Adaptive simulation
Classification and analysis of tube hydroforming processes with respect to adaptive FEM simulations, 261
Adhesive strength
Fabrication and application of high quality diamond-coated tools, 435
Agent
Agent-based modeling and mapping of a manufacturing system, 518
Agile manufacturing
Agent-based modeling and mapping of a manufacturing system, 518
Agility evaluation of mass customization product manufacturing, 640
Agility evaluation
Agility evaluation of mass customization product manufacturing, 640
Alignment
State-of-the-art technologies and kinematical analysis for one-stop finishing of ϕ300 mm Si wafer, 34
Alumina
A study on the prediction of the mechanical properties of a ceramic tool based on an artificial neural network, 399
Analysis of hyperbolic error
Hyperbolic error analysis and parametric optimization of a round body form tool, 603
Artificial neural network
Study of synthesis identification in the cutting process with a fuzzy neural network, 131
A study on the prediction of the mechanical properties of a ceramic tool based on an artificial neural network, 399
Recycling strategy and a recyclability assessment model based on an artificial neural network, 500
Assembled roller
3D design and analysis of the crushing roller of a high-pressure grinding roller, 649
Assemblies
Automated sequencing and sub-assembly detection in automobile body assembly planning, 490
Assessment model
Recycling strategy and a recyclability assessment model based on an artificial neural network, 500
Auto-body
Application of data mining and process knowledge discovery in sheet metal assembly dimensional variation diagnosis, 315

B-doped diamond
Synthesis of B-doped diamond using graphite intercalation compounds (GICs), 454
Bionic mechanics
Active vibration isolation of a micro-manufacturing platform based on a neural network, 634
Bonding material
Improvement of a dicing blade using a whisker direction-controlled by an electric field, 377
Brake
Analysis and design of a cylindrical magneto-rheological fluid brake, 559
Buckling
Study on the theory and application of the energy method for analyzing compressive instability in sheet forming, 255
Button bit
Research on diamond-enhanced tungsten carbide composite button bits, 395

C:FBS model
Creative design research of product appearance based on human–machine interaction and interface, 545
CAD/CAM
The CAD/CAM solution and its realization for the machining of the rail girders in the Maglev transrapid project (MTP), 607
Research on a dispersed networked CAD/CAM system of motorcycle, 658
CAD/CAM/CAE
Multi-model technology and its application in the integration of CAD/CAM/CAE, 563
Camber grinding machine
Theoretical study on a non-transmission high efficient parallel camber grinding machine, 551
Car lamp design
Study on segmented reflector lamp design based on error analysis, 529
Carbon nitride
Research on the cutting performance of carbon nitride cutting tools, 157
CCD
Plasma jet imaging by CCD technology in rapid mold manufacturing, 250

Elsevier Science B.V.
PII: S0924-0136(02)00884-1

Ceramic
Theoretical generalization and research on the mechanism of the unsteady-state grinding technique, 71
Experimental studies on grinding forces and force ratio of the unsteady-state grinding technique, 76
Analysis of material removal in alumina ceramic honing, 167
Ceramics grinding under the condition of constant pressure, 176
Analysis of the rotary ultrasonic machining mechanism, 182
Thermal aspects in the face grinding of ceramics, 212
Modeling of material removal rate in rotary ultrasonic machining: designed experiments, 339
Study on the ground surface quality of Cr_2O_3 coatings, 441
Ceramic balls
A new shaping model for green ceramic balls, 423
Ceramic tool
A study on the development of a composite ceramic tool ZrO_2/(W, Ti)C and its cutting performance, 349
A study on the prediction of the mechanical properties of a ceramic tool based on an artificial neural network, 399
Ceramic tool materials
Relationship between the thermal shock behavior and the cutting performance of a functionally gradient ceramic tool, 161
Ceramic tools
High speed cutting of Inconel 718 with coated carbide and ceramic inserts, 127
Ceramics grinding
A thermal elastoplastic model of the surface residual stress of ceramics grinding, 451
Chatter
Frequency modulation of high-speed mill chatter, 148
Chemical vapor deposition
Development of diamond-coated drills and their cutting performance, 81
Chemical–mechanical polishing
Research on abrasives in the chemical–mechanical polishing process for silicon nitride balls, 171
Chip deformation
Assessment of deformation of a shear localized chip in high speed machining, 101
Cleaning element
Research on the working mechanism and virtual design for a brush shape cleaning element of a sugarcane harvester, 418
Cluster analysis
The processing of parts with group technology in an individual CNC machining center, 645
CNC grinding machining
Study of a CNC grinding machining method using an isometric polygon profile, 237
CNC machine tool
Modeling approach of regression orthogonal experiment design for the thermal error compensation of a CNC turning center, 619
CNC machining
Research on a fault monitoring system in free-form surface CNC machining based on wavelet analysis, 588
Coated carbide tools
High speed cutting of Inconel 718 with coated carbide and ceramic inserts, 127
Coated cutter
Experimental study on the machining of a shaped hole in Ni-based super-heat-resistant alloy, 143
Coating
Properties and applications of Ti-coated diamond grits, 369
Coding classification
The processing of parts with group technology in an individual CNC machining center, 645
Cold press die
Visualization simulations for a cold press die, 321
Color 3D
Color 3D reverse engineering, 495
Combined machining
Adaptive fuzzy control system of a servomechanism for electro-discharge machining combined with ultrasonic vibration, 45
Combustion chamber
Application of reaction sintering to the manufacturing of a space-craft combustion chamber of SiC ceramics, 408
Common abrasive wheel
Theoretical generalization and research on the mechanism of the unsteady-state grinding technique, 71
Experimental studies on grinding forces and force ratio of the unsteady-state grinding technique, 76
Complex surface
Research on an ultrasonic NDT system for complex surface parts, 667
Compliant EDM polishing
Study of the contact force in free-form-surfaces compliant EDM polishing by robot, 186
Composite control
A wavelet approach to determine the switching frequency for composite control during surface grinding, 480
Composite materials
An investigation of laser-assisted machining of Al_2O_3 particle reinforced aluminum matrix composite, 268
Composite SiCp/Al
Research on the characteristics of the cutting force in the vibration cutting of a particle-reinforced metal matrix composites SiCp/Al, 196
Computer aided design (CAD)
Creative design research of product appearance based on human–machine interaction and interface, 545
Computer simulation
Computer simulation and optimization of metal cutting process for mild carbon steels, 60
Investigation of tool geometry in nanometric cutting by molecular dynamics simulation, 105
Multi-parameter optimization and control of the cylindrical grinding process, 232
Contract force
Study of the contact force in free-form-surfaces compliant EDM polishing by robot, 186
Coolant
A curve matching image processing technique for analysis of coolant flow patterns, 10
Coordinate measuring machine (CMM)
The direct-error-compensation method of measuring the error of a six-freedom-degree parallel mechanism CMM, 574
CORBA
Research on a dispersed networked CAD/CAM system of motorcycle, 658
Cost-effective
Cost-effective machining of granite by reducing tribological interactions, 389
Creative design
Creative design research of product appearance based on human–machine interaction and interface, 545
Cr_2O_3 coating
Study on the ground surface quality of Cr_2O_3 coatings, 441
Cross-wedge rolling (CWR)
Three-dimensional rigid–plastic finite element simulation for the two-roll cross-wedge rolling process, 245
Cutting
An investigation of laser-assisted machining of Al_2O_3 particle reinforced aluminum matrix composite, 268
Cutting fluid
A curve matching image processing technique for analysis of coolant flow patterns, 10

Fuzzy clustering analysis of the grinding burn damage level of a workpiece surface layer, 373
A decision-making framework model of cutting fluid selection for green manufacturing and a case study, 467
Cutting force
Experimental study on the milling of a Ti Beta 21S, 190
Research on the characteristics of the cutting force in the vibration cutting of a particle-reinforced metal matrix composites SiCp/Al, 196
Cutting performance
Development of diamond-coated drills and their cutting performance, 81
Research on the cutting performance of carbon nitride cutting tools, 157
Relationship between the thermal shock behavior and the cutting performance of a functionally gradient ceramic tool, 161
A study on the development of a composite ceramic tool ZrO_2/(W, Ti)C and its cutting performance, 349
Cutting temperature
Cutting temperature and tool wear of hard turning hardened bearing steel, 200
Cutting tool
Research on the cutting performance of carbon nitride cutting tools, 157
Wear patterns and mechanisms of cutting tools in high-speed face milling, 222
Cylinder head
Multi-model technology and its application in the integration of CAD/CAM/CAE, 563

3D design
3D design and analysis of the crushing roller of a high-pressure grinding roller, 649
3D FE simulation
A study on a 3D FE simulation method of the NC bending process of thin-walled tube, 273
3D measurement
A study of the precision factors of large-scale object surface profile laser scanning measurement, 584
Data exchange
Research on the application of technology-oriented rapid response manufacturing in a distributed network environment, 579
Data mining
Application of data mining and process knowledge discovery in sheet metal assembly dimensional variation diagnosis, 315
Decision tree
Application of data mining and process knowledge discovery in sheet metal assembly dimensional variation diagnosis, 315
Decision-making model
A decision-making framework model of cutting fluid selection for green manufacturing and a case study, 467
Deep-drawing
Study on the theory and application of the energy method for analyzing compressive instability in sheet forming, 255
Deformation of chip
Research on the vibration cutting performance of particle reinforced metallic matrix composites SiCp/Al, 380
Densification
Densification model for porous metallic powder materials, 385
Depth of burning layer
Multi-parameter optimization and control of the cylindrical grinding process, 232
Design for recycling
Recycling strategy and a recyclability assessment model based on an artificial neural network, 500
Design method
Analysis and design of a cylindrical magneto-rheological fluid brake, 559
Design of experimental
Modeling of material removal rate in rotary ultrasonic machining: designed experiments, 339
Diameter
The measurement and control of diameter in large-scale part processing, 653
Diamond
Quantitative analysis of the loads acting on the abrasive grits in the diamond sawing of granites, 50
Properties and applications of Ti-coated diamond grits, 369
Research on diamond-enhanced tungsten carbide composite button bits, 395
Diamond impregnated composite
Effects of rare earth and sintering temperature on the transverse rupture strength of Fe-based diamond composites, 427
Diamond thin film
Development of diamond-coated drills and their cutting performance, 81
Fabrication and application of high quality diamond-coated tools, 435
Dicing blade
Improvement of a dicing blade using a whisker direction-controlled by an electric field, 377
Die wall lubrication
Effect of die wall lubrication on warm compaction powder metallurgy, 354
Diffusion bonding
Theoretical model of the transformation superplastic diffusion bonding of eutectoid steel, 458
Dilatation
Calculation of the phase transformation kinetics from a dilatation curve, 345
Dilatational strain increment
Computer simulation and optimization of metal cutting process for mild carbon steels, 60
Direct-error-compensation method
The direct-error-compensation method of measuring the error of a six-freedom-degree parallel mechanism CMM, 574
Disassembly sequence
A maintainability analysis visualization system and its development under the AutoCAD environment, 277
Disk–pad brake
Transient temperature field analysis of a brake in a non-axisymmetric three-dimensional model, 513
Disparity
Quantitative analysis of the loads acting on the abrasive grits in the diamond sawing of granites, 50
Dispersed networked
Research on a dispersed networked CAD/CAM system of motorcycle, 658
Distributed network environment
Research on the application of technology-oriented rapid response manufacturing in a distributed network environment, 579
Double-edges laser-scanned
The measurement and control of diameter in large-scale part processing, 653
Drill
Development of diamond-coated drills and their cutting performance, 81
Dual pole tool
Improvement of electrochemical machining accuracy by using dual pole tool, 15
Ductile mode grinding
State-of-the-art technologies and kinematical analysis for one-stop finishing of ϕ300 mm Si wafer, 34

Electrical discharge coating
Surface modification process by electrical discharge machining with a Ti powder green compact electrode, 139
Electrical discharge machining
Surface modification process by electrical discharge machining with a Ti powder green compact electrode, 139
Electrochemical machining
Improvement of electrochemical machining accuracy by using dual pole tool, 15
Electrochemical polishing
Magnetic electrochemical finishing machining, 283
Electron beam local heat-treatment
Effects of electron beam local post-weld heat-treatment on the microstructure and properties of 30CrMnSiNi2A steel welded joints, 412
Electron beam welding
Effects of electron beam local post-weld heat-treatment on the microstructure and properties of 30CrMnSiNi2A steel welded joints, 412
ELID grinding
High efficiency ELID grinding of garnet ferrite, 41
End milling
Study on an end milling generation surface model and simulation taking into account of the main axle's tolerance, 86
Energy method
Study on the theory and application of the energy method for analyzing compressive instability in sheet forming, 255
Engineering ceramic
Study on ceramic cutting by plasma arc, 152
Studies on the surface quality of the unsteady-state grinding technique, 364
Environmental impact
A decision-making framework model of cutting fluid selection for green manufacturing and a case study, 467
Error compensation
A universal modeling method for enhancement the volumetric accuracy of CNC machine tools, 624
Error model
The direct-error-compensation method of measuring the error of a six-freedom-degree parallel mechanism CMM, 574
Eutectoid steel
Theoretical model of the transformation superplastic diffusion bonding of eutectoid steel, 458

Face grinding
Thermal aspects in the face grinding of ceramics, 212
Face milling
Internet-based optimization and choice of insert grooves for face-milling, 109
Wear patterns and mechanisms of cutting tools in high-speed face milling, 222
Fast response
Research on an intelligent manufacturing system based on an information-localizing machining mode, 597
Fatigue properties
Effects of electron beam local post-weld heat-treatment on the microstructure and properties of 30CrMnSiNi2A steel welded joints, 412
Fatigue strength
The influence of inclusions on the fatigue strength of a ceramic bush, 471
Feedback control
The measurement and control of diameter in large-scale part processing, 653
FEM
Computer simulation and optimization of metal cutting process for mild carbon steels, 60
Transient temperature field analysis of a brake in a non-axisymmetric three-dimensional model, 513
Finite element analysis
Finite element analysis for grinding and lapping of wire-sawn silicon wafers, 2
Research on the working mechanism and virtual design for a brush shape cleaning element of a sugarcane harvester, 418
A thermal elastoplastic model of the surface residual stress of ceramics grinding, 451
3D design and analysis of the crushing roller of a high-pressure grinding roller, 649
Finite element method (FEM)
Three-dimensional rigid–plastic finite element simulation for the two-roll cross-wedge rolling process, 245
The influence of inclusions on the fatigue strength of a ceramic bush, 471
Fixed abrasive process
State-of-the-art technologies and kinematical analysis for one-stop finishing of ϕ300 mm Si wafer, 34
Fixture planning
The processing of parts with group technology in an individual CNC machining center, 645
Flatness
State-of-the-art technologies and kinematical analysis for one-stop finishing of ϕ300 mm Si wafer, 34
Flexible forming
Multi-point forming technology for sheet metal, 333
Flexible transfer line
Research on flexible transfer line schematic design using hierarchical process planning, 629
Floquet theory
Investigation into the electromechanical coupling unstability of a rolling mill, 294
Force
Quantitative analysis of the loads acting on the abrasive grits in the diamond sawing of granites, 50
Forming defects
Multi-point forming technology for sheet metal, 333
Forming path
Multi-point forming technology for sheet metal, 333
Forming technique
Plasma spray forming, 288
Fracture toughness
Effects of electron beam local post-weld heat-treatment on the microstructure and properties of 30CrMnSiNi2A steel welded joints, 412
Free-form surfaces
Study of the contact force in free-form-surfaces compliant EDM polishing by robot, 186
Research on a fault monitoring system in free-form surface CNC machining based on wavelet analysis, 588
Frequency modulation
Frequency modulation of high-speed mill chatter, 148
Friction characteristics
Frictional characteristics of mechanical seals with a laser-textured seal face, 463
Friction coefficient
Study on the friction coefficient in grinding, 25
Friction interaction
Cost-effective machining of granite by reducing tribological interactions, 389
Frictional heat
Transient temperature field analysis of a brake in a non-axisymmetric three-dimensional model, 513
Full resonance
Experimental and theoretical research on 'local resonance' in an ultrasonic honing system, 207

Functionally gradient materials
Relationship between the thermal shock behavior and the cutting performance of a functionally gradient ceramic tool, 161
Fuzzy clustering analysis
Fuzzy clustering analysis of the grinding burn damage level of a workpiece surface layer, 373
Fuzzy inference
Study of synthesis identification in the cutting process with a fuzzy neural network, 131
Fuzzy matter-element
A new integrated design method based on fuzzy matter-element optimization, 612
Fuzzy–grey
Fuzzy–grey prediction of cutting force uncertainty in turning, 663

Garnet ferrite
High efficiency ELID grinding of garnet ferrite, 41
Gas medium
Ultrasonic vibration electrical discharge machining in gas, 135
Gear shaving
Design and manufacture of a shaving cutter with unequal depth gashes, 193
Generation model
Study on an end milling generation surface model and simulation taking into account of the main axle's tolerance, 86
Genetic algorithm
A parallel search genetic algorithm based on multiple peak values and multiple rules, 539
A new integrated design method based on fuzzy matter-element optimization, 612
Geometric and thermal error
An application of real-time error compensation on an NC twin-spindle lathe, 474
Global illumination
Construction of a realistic scene in virtual turning based on a global illumination model and chip simulation, 524
Glossiness
Micro-structure detection of a glossy granite surface machined by the grinding process, 403
Granite
Quantitative analysis of the loads acting on the abrasive grits in the diamond sawing of granites, 50
Cost-effective machining of granite by reducing tribological interactions, 389
Granite surface
Micro-structure detection of a glossy granite surface machined by the grinding process, 403
Graphite intercalation compounds
Synthesis of B-doped diamond using graphite intercalation compounds (GICs), 454
Grating displacement measurement
The measurement and control of diameter in large-scale part processing, 653
Green
A new shaping model for green ceramic balls, 423
Green manufacturing
A decision-making framework model of cutting fluid selection for green manufacturing and a case study, 467
Grinding
Finite element analysis for grinding and lapping of wire-sawn silicon wafers, 2
Simulation and experimental analysis of super high-speed grinding of ductile material, 19
Study on the friction coefficient in grinding, 25
High efficiency ELID grinding of garnet ferrite, 41
Experimental study on the machining of a shaped hole in Ni-based super-heat-resistant alloy, 143
Studies on the surface quality of the unsteady-state grinding technique, 364
Study on the ground surface quality of Cr_2O_3 coatings, 441
A wavelet approach to determine the switching frequency for composite control during surface grinding, 480
Grinding burn
Fuzzy clustering analysis of the grinding burn damage level of a workpiece surface layer, 373
Grinding energy
Ceramics grinding under the condition of constant pressure, 176
Grinding force
Experimental studies on grinding forces and force ratio of the unsteady-state grinding technique, 76
Ceramics grinding under the condition of constant pressure, 176
Grinding force ratio
Experimental studies on grinding forces and force ratio of the unsteady-state grinding technique, 76
Grinding mechanism
Theoretical generalization and research on the mechanism of the unsteady-state grinding technique, 71
Grinding process
The simulation of grinding wheels and ground surface roughness based on virtual reality technology, 123
Multi-parameter optimization and control of the cylindrical grinding process, 232
Grinding temperature
Ceramics grinding under the condition of constant pressure, 176
Thermal aspects in the face grinding of ceramics, 212
Grinding wheel topography
Optimization design of grinding wheel topography for high efficiency grinding, 118
Ground surface roughness
The simulation of grinding wheels and ground surface roughness based on virtual reality technology, 123

Hard and brittle material
High efficiency ELID grinding of garnet ferrite, 41
Hard turning
Cutting temperature and tool wear of hard turning hardened bearing steel, 200
Experimental study on hard turning hardened GCr15 steel with PCBN tool, 217
Hardened bearing steel
Cutting temperature and tool wear of hard turning hardened bearing steel, 200
Experimental study on hard turning hardened GCr15 steel with PCBN tool, 217
Helical chip
Construction of a realistic scene in virtual turning based on a global illumination model and chip simulation, 524
Hertz contact
Experimental validation of the dynamic models of a high performance workpiece table under preloaded Hertzian contact, 485
Heterogeneous agent architecture
Agent-based modeling and mapping of a manufacturing system, 518
Hierarchical process planning
Research on flexible transfer line schematic design using hierarchical process planning, 629
High efficiency grinding
Optimization design of grinding wheel topography for high efficiency grinding, 118
High performance machining control
Experimental validation of the dynamic models of a high performance workpiece table under preloaded Hertzian contact, 485
High speed cutting
High speed cutting of Inconel 718 with coated carbide and ceramic inserts, 127

High speed grinding
Theoretical study on a non-transmission high efficient parallel camber grinding machine, 551
High speed machining
Assessment of deformation of a shear localized chip in high speed machining, 101
Wear patterns and mechanisms of cutting tools in high-speed face milling, 222
High-pressure grinding roller
3D design and analysis of the crushing roller of a high-pressure grinding roller, 649
High-speed tool system
Study of the compound polishing process on SnSb alloy moulds, 310
Honing
Analysis of material removal in alumina ceramic honing, 167
Honing wheel structure
Optimization of honing wheel structure parameters in ultra-precision plane honing, 96
Human–machine interaction and interface (HMI&I)
Creative design research of product appearance based on human–machine interaction and interface, 545
Hydrodynamic effects
Frictional characteristics of mechanical seals with a laser-textured seal face, 463

Image processing
A curve matching image processing technique for analysis of coolant flow patterns, 10
Method of monitoring wearing and breakage states of cutting tools based on Mahalanobis distance features, 114
Plasma jet imaging by CCD technology in rapid mold manufacturing, 250
Immersive VPD
Immersive virtual product development, 592
Inclusion
The influence of inclusions on the fatigue strength of a ceramic bush, 471
Inconel 718
High speed cutting of Inconel 718 with coated carbide and ceramic inserts, 127
Individual difference control
A parallel search genetic algorithm based on multiple peak values and multiple rules, 539
Information-localizing
Research on an intelligent manufacturing system based on an information-localizing machining mode, 597
In-process measurement
A curve matching image processing technique for analysis of coolant flow patterns, 10
Insert groove
Internet-based optimization and choice of insert grooves for face-milling, 109
Instability mechanism
Instability mechanism of a rotating disc subjected to various transverse interactive forces, 534
Instantaneous clearance
Research of the plastic status parameter and instantaneous clearance of a punching without burr, 305
Integration
Multi-model technology and its application in the integration of CAD/CAM/CAE, 563
Intelligent manufacturing
Research on an intelligent manufacturing system based on an information-localizing machining mode, 597
Internet-based
Internet-based optimization and choice of insert grooves for face-milling, 109
Isometric polygonal profile
Study of a CNC grinding machining method using an isometric polygon profile, 237
Isometric polygonal topless cone
Study of a CNC grinding machining method using an isometric polygon profile, 237

Kinetics
Calculation of the phase transformation kinetics from a dilatation curve, 345

Lapping
Finite element analysis for grinding and lapping of wire-sawn silicon wafers, 2
Large depth-to-diameter ratio
Research on a large depth-to-diameter ratio ultra-precision aspheric grinding system, 91
Large-scale object
A study of the precision factors of large-scale object surface profile laser scanning measurement, 584
Laser
Frictional characteristics of mechanical seals with a laser-textured seal face, 463
Laser scanning
A study of the precision factors of large-scale object surface profile laser scanning measurement, 584
Laser shock wave
A study on super-speed forming of metal sheet by laser shock waves, 241
Laser-assisted machining
An investigation of laser-assisted machining of Al_2O_3 particle reinforced aluminum matrix composite, 268
Light distribution
Study on segmented reflector lamp design based on error analysis, 529
Loading path
Classification and analysis of tube hydroforming processes with respect to adaptive FEM simulations, 261
Local resonance
Experimental and theoretical research on 'local resonance' in an ultrasonic honing system, 207

Machine tool
An application of real-time error compensation on an NC twin-spindle lathe, 474
Machining
A curve matching image processing technique for analysis of coolant flow patterns, 10
Modeling of material removal rate in rotary ultrasonic machining: designed experiments, 339
Machining accuracy
Optimization of honing wheel structure parameters in ultra-precision plane honing, 96
Machining efficiency
The application of research on powder mixed EDM in rough machining, 30
Magnetic electrochemical finishing machining, 283
Machining mechanism
Investigation of tool geometry in nanometric cutting by molecular dynamics simulation, 105
Maglev transrapid project
The CAD/CAM solution and its realization for the machining of the rail girders in the Maglev transrapid project (MTP), 607
Magnesium alloy
Study on the semi-solid rheocasting of magnesium alloy by mechanical stirring, 431
Magnetic field
Magnetic electrochemical finishing machining, 283

Optimal design of the magnetic field of a high-speed response solenoid valve, 555
Mahalanobis distance
Method of monitoring wearing and breakage states of cutting tools based on Mahalanobis distance features, 114
Maintainability
A maintainability analysis visualization system and its development under the AutoCAD environment, 277
Maintainability analysis
A maintainability analysis visualization system and its development under the AutoCAD environment, 277
Manufacturing feature
The CAD/CAM solution and its realization for the machining of the rail girders in the Maglev transrapid project (MTP), 607
Mass customization (MC)
Research of the optimization methods for mass customization (MC), 507
Agility evaluation of mass customization product manufacturing, 640
Material removal
Analysis of material removal in alumina ceramic honing, 167
Material removal rate
Modeling of material removal rate in rotary ultrasonic machining: designed experiments, 339
Mathematical modeling
Numerically controlled rolling process of thick metal plate, 299
MATLAB (MATrix LABoratory)
A study on the prediction of the mechanical properties of a ceramic tool based on an artificial neural network, 399
Mechanical property
A study on the development of a composite ceramic tool ZrO_2/(W, Ti)C and its cutting performance, 349
A study on the prediction of the mechanical properties of a ceramic tool based on an artificial neural network, 399
Mechanical seals
Frictional characteristics of mechanical seals with a laser-textured seal face, 463
Metal plate bending
Numerically controlled rolling process of thick metal plate, 299
Metal sheet forming
A study on super-speed forming of metal sheet by laser shock waves, 241
Micro-manufacturing platform
Active vibration isolation of a micro-manufacturing platform based on a neural network, 634
Microstructure
Research on the influence of the cutting conditions on the surface microstructure of ultra-thin wall parts in ultrasonic vibration cutting, 66
Research on the vibration cutting performance of particle reinforced metallic matrix composites SiCp/Al, 380
Effects of electron beam local post-weld heat-treatment on the microstructure and properties of 30CrMnSiNi2A steel welded joints, 412
Micro-tribology metrology
Precision metrology of micro-workpieces on their tribological performance with an error compensation method, 227
Mid-concave
Design and manufacture of a shaving cutter with unequal depth gashes, 193
Mild carbon steels
Computer simulation and optimization of metal cutting process for mild carbon steels, 60
Milled surface
Study on an end milling generation surface model and simulation taking into account of the main axle's tolerance, 86
Milling
Experimental study on the machining of a shaped hole in Ni-based super-heat-resistant alloy, 143
Experimental study on the milling of a Ti Beta 21S, 190
Model
Study on the friction coefficient in grinding, 25
Modeling
Calculation of the phase transformation kinetics from a dilatation curve, 345
Optimal design of the magnetic field of a high-speed response solenoid valve, 555
Multi-model technology and its application in the integration of CAD/CAM/CAE, 563
Molecular dynamics
Simulation and experimental analysis of super high-speed grinding of ductile material, 19
Investigation of tool geometry in nanometric cutting by molecular dynamics simulation, 105
Monitoring system
Research on a fault monitoring system in free-form surface CNC machining based on wavelet analysis, 588
Motorcycle
Research on a dispersed networked CAD/CAM system of motorcycle, 658
Mould
Study of the compound polishing process on SnSb alloy moulds, 310
MR fluids
Analysis and design of a cylindrical magneto-rheological fluid brake, 559
MRR
Ultrasonic vibration electrical discharge machining in gas, 135
Multi-body system
A universal modeling method for enhancement the volumetric accuracy of CNC machine tools, 624
Multidiscipline simulation
Immersive virtual product development, 592
Multi-objective optimization
A new integrated design method based on fuzzy matter-element optimization, 612
Multi-parameter optimization
Multi-parameter optimization and control of the cylindrical grinding process, 232
Multi-pass conventional spinning
A study of the stress and strain distributions of first-pass conventional spinning under different roller-traces, 326
Multi-peak search
A parallel search genetic algorithm based on multiple peak values and multiple rules, 539
Multi-point forming
Multi-point forming technology for sheet metal, 333
Multistep
Calculation of the phase transformation kinetics from a dilatation curve, 345

NC bending process
A study on a 3D FE simulation method of the NC bending process of thin-walled tube, 273
NC machine
A universal modeling method for enhancement the volumetric accuracy of CNC machine tools, 624
Networked customization
Study on the product description method for networked customization, 568
Neural network
Active vibration isolation of a micro-manufacturing platform based on a neural network, 634

Nickel-based super-heat-resistant alloy
Experimental study on the machining of a shaped hole in Ni-based super-heat-resistant alloy, 143
Non-axisymmetric temperature field
Transient temperature field analysis of a brake in a non-axisymmetric three-dimensional model, 513
Non-transmission
Theoretical study on a non-transmission high efficient parallel camber grinding machine, 551
Numerical control system
Numerically controlled rolling process of thick metal plate, 299
Numerical error compensation
Precision metrology of micro-workpieces on their tribological performance with an error compensation method, 227
Numerical simulation
A study of the stress and strain distributions of first-pass conventional spinning under different roller-traces, 326

On-line dynamic measurement
The measurement and control of diameter in large-scale part processing, 653
On-line monitoring
Study of synthesis identification in the cutting process with a fuzzy neural network, 131
Operation sequencing
Research on flexible transfer line schematic design using hierarchical process planning, 629
Optical aspheric surface
Research on a large depth-to-diameter ratio ultra-precision aspheric grinding system, 91
Optical plane equation
Color 3D reverse engineering, 495
Optimal design
Optimal design of the magnetic field of a high-speed response solenoid valve, 555
Optimization
Computer simulation and optimization of metal cutting process for mild carbon steels, 60
Research of the optimization methods for mass customization (MC), 507
Optimization and choice
Internet-based optimization and choice of insert grooves for face-milling, 109
Optimization parameters
Optimization of honing wheel structure parameters in ultra-precision plane honing, 96
Optimum control
Multi-parameter optimization and control of the cylindrical grinding process, 232
Orthogonal design
Experimental investigation into shaping particle-reinforced material by WEDM-HS, 56
Orthogonal experiment
Research on the working mechanism and virtual design for a brush shape cleaning element of a sugarcane harvester, 418

Parameter
Research of the plastic status parameter and instantaneous clearance of a punching without burr, 305
Parametric optimization
Hyperbolic error analysis and parametric optimization of a round body form tool, 603
Parametric vibration
Investigation into the electromechanical coupling unstability of a rolling mill, 294
Particle-reinforced material
Experimental investigation into shaping particle-reinforced material by WEDM-HS, 56
PCBN tool
Experimental study on hard turning hardened GCr15 steel with PCBN tool, 217
PCD tool
Research on the influence of the cutting conditions on the surface microstructure of ultra-thin wall parts in ultrasonic vibration cutting, 66
Research on the characteristics of the cutting force in the vibration cutting of a particle-reinforced metal matrix composites SiCp/Al, 196
PDM
Research on a dispersed networked CAD/CAM system of motorcycle, 658
Peak-depot
A parallel search genetic algorithm based on multiple peak values and multiple rules, 539
Performance evaluation
Fuzzy clustering analysis of the grinding burn damage level of a workpiece surface layer, 373
Phase transformation
Calculation of the phase transformation kinetics from a dilatation curve, 345
Theoretical model of the transformation superplastic diffusion bonding of eutectoid steel, 458
Planning
Automated sequencing and sub-assembly detection in automobile body assembly planning, 490
Plasma
Plasma spray forming, 288
Plasma confinement
Study on ceramic cutting by plasma arc, 152
Plasma cutting
Study on ceramic cutting by plasma arc, 152
Plasma jet
Plasma jet imaging by CCD technology in rapid mold manufacturing, 250
Plastic forming
Three-dimensional rigid–plastic finite element simulation for the two-roll cross-wedge rolling process, 245
Plastic status
Research of the plastic status parameter and instantaneous clearance of a punching without burr, 305
Plug-in
Study on the product description method for networked customization, 568
Point-cast method
A parallel search genetic algorithm based on multiple peak values and multiple rules, 539
Polishing
Study of the compound polishing process on SnSb alloy moulds, 310
Polishing-like finishing
State-of-the-art technologies and kinematical analysis for one-stop finishing of ϕ300 mm Si wafer, 34
Polycrystalline cubic boron nitride
Cutting temperature and tool wear of hard turning hardened bearing steel, 200
Positioning
State-of-the-art technologies and kinematical analysis for one-stop finishing of ϕ300 mm Si wafer, 34
Position-stance error
The direct-error-compensation method of measuring the error of a six-freedom-degree parallel mechanism CMM, 574

Post-process
The CAD/CAM solution and its realization for the machining of the rail girders in the Maglev transrapid project (MTP), 607
Powder metallurgy
Effect of die wall lubrication on warm compaction powder metallurgy, 354
Powder mixed EDM
The application of research on powder mixed EDM in rough machining, 30
Precise adjusting mechanism
Research on a large depth-to-diameter ratio ultra-precision aspheric grinding system, 91
Precision factors
A study of the precision factors of large-scale object surface profile laser scanning measurement, 584
Precision feed
Theoretical study on a non-transmission high efficient parallel camber grinding machine, 551
Prediction
Fuzzy–grey prediction of cutting force uncertainty in turning, 663
Pretreatment of diamond
Research on diamond-enhanced tungsten carbide composite button bits, 395
PRMMCs
Research on the vibration cutting performance of particle reinforced metallic matrix composites SiCp/Al, 380
Process classification
Classification and analysis of tube hydroforming processes with respect to adaptive FEM simulations, 261
Process planning
Numerically controlled rolling process of thick metal plate, 299
Product appearance design
Creative design research of product appearance based on human–machine interaction and interface, 545
Product description
Study on the product description method for networked customization, 568
Product recycling
Recycling strategy and a recyclability assessment model based on an artificial neural network, 500
Propagation speed of plastic wave
Simulation and experimental analysis of super high-speed grinding of ductile material, 19
Pseudo-NC
The CAD/CAM solution and its realization for the machining of the rail girders in the Maglev transrapid project (MTP), 607
Punching
Research of the plastic status parameter and instantaneous clearance of a punching without burr, 305

Rapid mold manufacturing
Plasma jet imaging by CCD technology in rapid mold manufacturing, 250
Rapid response manufacturing
Research on the application of technology-oriented rapid response manufacturing in a distributed network environment, 579
Rare earth
Effects of rare earth and sintering temperature on the transverse rupture strength of Fe-based diamond composites, 427
Ray tracing
Construction of a realistic scene in virtual turning based on a global illumination model and chip simulation, 524
Reaction sintering
Application of reaction sintering to the manufacturing of a spacecraft combustion chamber of SiC ceramics, 408
Real-NC
The CAD/CAM solution and its realization for the machining of the rail girders in the Maglev transrapid project (MTP), 607
Real-time error compensation
An application of real-time error compensation on an NC twin-spindle lathe, 474
Recycling strategy
Recycling strategy and a recyclability assessment model based on an artificial neural network, 500
Regression analysis
Research on the working mechanism and virtual design for a brush shape cleaning element of a sugarcane harvester, 418
Regression orthogonal
Modeling approach of regression orthogonal experiment design for the thermal error compensation of a CNC turning center, 619
Residual stress
A study on super-speed forming of metal sheet by laser shock waves, 241
Experimental research on the residual stress in the surface of silicon nitride ceramic balls, 446
A thermal elastoplastic model of the surface residual stress of ceramics grinding, 451
Resin
Improvement of a dicing blade using a whisker direction-controlled by an electric field, 377
Reverse engineering
Color 3D reverse engineering, 495
Rheocasting
Study on the semi-solid rheocasting of magnesium alloy by mechanical stirring, 431
Robot
Study of the contact force in free-form-surfaces compliant EDM polishing by robot, 186
Robust modeling
Modeling approach of regression orthogonal experiment design for the thermal error compensation of a CNC turning center, 619
Roller-traces
A study of the stress and strain distributions of first-pass conventional spinning under different roller-traces, 326
Rolling mill
Frequency modulation of high-speed mill chatter, 148
Investigation into the electromechanical coupling unstability of a rolling mill, 294
Rotary ultrasonic machining
Modeling of material removal rate in rotary ultrasonic machining: designed experiments, 339
Rotating disk
Instability mechanism of a rotating disc subjected to various transverse interactive forces, 534
Rough machining
The application of research on powder mixed EDM in rough machining, 30
Roughness
State-of-the-art technologies and kinematical analysis for one-stop finishing of ϕ300 mm Si wafer, 34
Micro-structure detection of a glossy granite surface machined by the grinding process, 403
Round body form tool
Hyperbolic error analysis and parametric optimization of a round body form tool, 603

Sawing
Quantitative analysis of the loads acting on the abrasive grits in the diamond sawing of granites, 50
Cost-effective machining of granite by reducing tribological interactions, 389

Schematic design
Research on flexible transfer line schematic design using hierarchical process planning, 629
Scheme design
A new integrated design method based on fuzzy matter-element optimization, 612
Segmented surface reflector
Study on segmented reflector lamp design based on error analysis, 529
SEM
Micro-structure detection of a glossy granite surface machined by the grinding process, 403
Semi-solid
Study on the semi-solid rheocasting of magnesium alloy by mechanical stirring, 431
Servomechanism
Adaptive fuzzy control system of a servomechanism for electro-discharge machining combined with ultrasonic vibration, 45
Shaping
A new shaping model for green ceramic balls, 423
Shear localization
Assessment of deformation of a shear localized chip in high speed machining, 101
Sheet forming
Study on the theory and application of the energy method for analyzing compressive instability in sheet forming, 255
Sheet metal
Multi-point forming technology for sheet metal, 333
Si wafer
State-of-the-art technologies and kinematical analysis for one-stop finishing of ϕ300 mm Si wafer, 34
SiC ceramics
Application of reaction sintering to the manufacturing of a space-craft combustion chamber of SiC ceramics, 408
Silicon nitride
Research on abrasives in the chemical–mechanical polishing process for silicon nitride balls, 171
Silicon nitride ceramic balls
Experimental research on the residual stress in the surface of silicon nitride ceramic balls, 446
Silicon wafer
Finite element analysis for grinding and lapping of wire-sawn silicon wafers, 2
Simulating
Visualization simulations for a cold press die, 321
Simulation
Study on an end milling generation surface model and simulation taking into account of the main axle's tolerance, 86
The simulation of grinding wheels and ground surface roughness based on virtual reality technology, 123
Densification model for porous metallic powder materials, 385
Optimal design of the magnetic field of a high-speed response solenoid valve, 555
Single crystal silicon
Investigation of tool geometry in nanometric cutting by molecular dynamics simulation, 105
Sintered powder metal
Densification model for porous metallic powder materials, 385
Sintering of low temperature activation hot-press
Research on diamond-enhanced tungsten carbide composite button bits, 395
Sintering temperature
Effects of rare earth and sintering temperature on the transverse rupture strength of Fe-based diamond composites, 427
Six-freedom-degree parallel mechanism CMM
The direct-error-compensation method of measuring the error of a six-freedom-degree parallel mechanism CMM, 574
SnSb alloy
Study of the compound polishing process on SnSb alloy moulds, 310
Spacecraft
Application of reaction sintering to the manufacturing of a space-craft combustion chamber of SiC ceramics, 408
Specific volume
Experimental research on the residual stress in the surface of silicon nitride ceramic balls, 446
Spherical deviation
A new shaping model for green ceramic balls, 423
Spray forming
Plasma spray forming, 288
Steels
Calculation of the phase transformation kinetics from a dilatation curve, 345
Stress and strain distributions
A study of the stress and strain distributions of first-pass conventional spinning under different roller-traces, 326
Stresses
Analysis of material removal in alumina ceramic honing, 167
Structure
Study on the semi-solid rheocasting of magnesium alloy by mechanical stirring, 431
Sub-assemblies
Automated sequencing and sub-assembly detection in automobile body assembly planning, 490
Superalloy
Effect of grinding temperatures on the surface integrity of a nickel-based superalloy, 359
Superhard material
Research on the cutting performance of carbon nitride cutting tools, 157
Superplasticity
Theoretical model of the transformation superplastic diffusion bonding of eutectoid steel, 458
Surface grinding
Effect of grinding temperatures on the surface integrity of a nickel-based superalloy, 359
Surface integrity
Experimental study on hard turning hardened GCr15 steel with PCBN tool, 217
Effect of grinding temperatures on the surface integrity of a nickel-based superalloy, 359
Surface merging
Color 3D reverse engineering, 495
Surface modification
Surface modification process by electrical discharge machining with a Ti powder green compact electrode, 139
Surface quality
Studies on the surface quality of the unsteady-state grinding technique, 364
Study on the ground surface quality of Cr_2O_3 coatings, 441
Surface roughness
The application of research on powder mixed EDM in rough machining, 30
Research on the influence of the cutting conditions on the surface microstructure of ultra-thin wall parts in ultrasonic vibration cutting, 66
Fabrication and application of high quality diamond-coated tools, 435
Synthesis
Synthesis of B-doped diamond using graphite intercalation compounds (GICs), 454
Synthesis identification
Study of synthesis identification in the cutting process with a fuzzy neural network, 131

Systematic engineering
Research of the optimization methods for mass customization (MC), 507

Temperature
Quantitative analysis of the loads acting on the abrasive grits in the diamond sawing of granites, 50
Effect of grinding temperatures on the surface integrity of a nickel-based superalloy, 359
The alternator pole
Research on the casting–forging precision forming process of alternator poles, 330
The casting–forging precision forming process
Research on the casting–forging precision forming process of alternator poles, 330
Theoretical model
Theoretical model of the transformation superplastic diffusion bonding of eutectoid steel, 458
Thermal elastoplastic model
A thermal elastoplastic model of the surface residual stress of ceramics grinding, 451
Thermal error compensation
Modeling approach of regression orthogonal experiment design for the thermal error compensation of a CNC turning center, 619
Thermal shock resistance
Relationship between the thermal shock behavior and the cutting performance of a functionally gradient ceramic tool, 161
Ti powder green compact electrode
Surface modification process by electrical discharge machining with a Ti powder green compact electrode, 139
Titanium alloy
Experimental study on the milling of a Ti Beta 21S, 190
Tool
Properties and applications of Ti-coated diamond grits, 369
Tool condition monitoring
Method of monitoring wearing and breakage states of cutting tools based on Mahalanobis distance features, 114
Tool electrode wear
Ultrasonic vibration electrical discharge machining in gas, 135
Tool wear
High speed cutting of Inconel 718 with coated carbide and ceramic inserts, 127
Experimental study on the milling of a Ti Beta 21S, 190
Cutting temperature and tool wear of hard turning hardened bearing steel, 200
Tooth form error
Design and manufacture of a shaving cutter with unequal depth gashes, 193
Transfer matrix method
Experimental and theoretical research on 'local resonance' in an ultrasonic honing system, 207
Transient thermal stress
Relationship between the thermal shock behavior and the cutting performance of a functionally gradient ceramic tool, 161
Transverse interactive forces
Instability mechanism of a rotating disc subjected to various transverse interactive forces, 534
Transverse rupture strength
Effects of rare earth and sintering temperature on the transverse rupture strength of Fe-based diamond composites, 427
Tribological coefficient
Precision metrology of micro-workpieces on their tribological performance with an error compensation method, 227
Tube forming
A study on a 3D FE simulation method of the NC bending process of thin-walled tube, 273
Tube hydroforming
Classification and analysis of tube hydroforming processes with respect to adaptive FEM simulations, 261
Tungsten carbide
Research on diamond-enhanced tungsten carbide composite button bits, 395
Turning force
Fuzzy–grey prediction of cutting force uncertainty in turning, 663

UEDM
Ultrasonic vibration electrical discharge machining in gas, 135
Ultrahigh strain rate
A study on super-speed forming of metal sheet by laser shock waves, 241
Ultra-precision grinding
Research on a large depth-to-diameter ratio ultra-precision aspheric grinding system, 91
Ultraprecision machining
Investigation of tool geometry in nanometric cutting by molecular dynamics simulation, 105
Ultra-precision plane honing
Optimization of honing wheel structure parameters in ultra-precision plane honing, 96
Ultrasonic cutting
Research on the influence of the cutting conditions on the surface microstructure of ultra-thin wall parts in ultrasonic vibration cutting, 66
Ultrasonic honing system
Experimental and theoretical research on 'local resonance' in an ultrasonic honing system, 207
Ultrasonic machining
Analysis of the rotary ultrasonic machining mechanism, 182
Ultrasonic non-destructive testing system
Research on an ultrasonic NDT system for complex surface parts, 667
Ultrasonic vibration cutting
Research on the vibration cutting performance of particle reinforced metallic matrix composites SiCp/Al, 380
Ultrasonic vibration turning
Research on the characteristics of the cutting force in the vibration cutting of a particle-reinforced metal matrix composites SiCp/Al, 196
Ultra-thin wall parts
Research on the influence of the cutting conditions on the surface microstructure of ultra-thin wall parts in ultrasonic vibration cutting, 66
Uncertainty
Fuzzy–grey prediction of cutting force uncertainty in turning, 663
Unequal depth gashes
Design and manufacture of a shaving cutter with unequal depth gashes, 193
Unsteady-state grinding theory
Theoretical generalization and research on the mechanism of the unsteady-state grinding technique, 71
Experimental studies on grinding forces and force ratio of the unsteady-state grinding technique, 76
Studies on the surface quality of the unsteady-state grinding technique, 364

Variation diagnosis
Application of data mining and process knowledge discovery in sheet metal assembly dimensional variation diagnosis, 315
Vaulted profile
Study on an end milling generation surface model and simulation taking into account of the main axle's tolerance, 86

Vertical grinding
Ceramics grinding under the condition of constant pressure, 176
Virtual environment
Immersive virtual product development, 592
Virtual reality
The simulation of grinding wheels and ground surface roughness based on virtual reality technology, 123
Immersive virtual product development, 592
Virtual turning
Construction of a realistic scene in virtual turning based on a global illumination model and chip simulation, 524
Visualization
Visualization simulations for a cold press die, 321

Warm compaction
Effect of die wall lubrication on warm compaction powder metallurgy, 354
Wavelet analysis
Research on a fault monitoring system in free-form surface CNC machining based on wavelet analysis, 588
Wavelet transform
A wavelet approach to determine the switching frequency for composite control during surface grinding, 480
Waviness removal
Finite element analysis for grinding and lapping of wire-sawn silicon wafers, 2
Wear
Wear patterns and mechanisms of cutting tools in high-speed face milling, 222
Web
Research on a dispersed networked CAD/CAM system of motorcycle, 658
Wheel
The simulation of grinding wheels and ground surface roughness based on virtual reality technology, 123
Wire electric discharge machining with high traveling speed (WEDM-HS)
Experimental investigation into shaping particle-reinforced material by WEDM-HS, 56
Work-affected layer
Simulation and experimental analysis of super high-speed grinding of ductile material, 19
Working platform
The processing of parts with group technology in an individual CNC machining center, 645
Workpiece micro-positioning table
Experimental validation of the dynamic models of a high performance workpiece table under preloaded Hertzian contact, 485
Wrinkling
Multi-point forming technology for sheet metal, 333

Xylometric measurement
Experimental research on the residual stress in the surface of silicon nitride ceramic balls, 446

Zirconia
A study on the development of a composite ceramic tool ZrO_2/(W, Ti)C and its cutting performance, 349
